

Belsize Construction Ltd Environmental Policy

Belsize Construction Ltd recognises that it has a responsibility to the environment beyond legal and regulatory requirements. We are committed to reducing our environmental impact and continually improving our environmental performance as an integral part of our business strategy and operating methods, with regular review points. We will encourage customers, suppliers and other stakeholders to do the same. Environmental targets and objectives are set for our business that are checked by regular management and supervisory actions together with independent internal and third party audits/surveillances. We endeavour to comply with and exceed all relevant regulatory requirements.

We believe and promote that all our directly employed personnel together with any specialist sub-contractors and suppliers are responsible for the adherence to environmental targets, objectives and management programmes.

Our people will receive the appropriate levels of training and awareness to ensure that due emphasis is placed on the protection of the Environment and site care/cleanliness.

We will reduce the impact of materials by reducing consumption and using recycled materials. Recycling and re-use of materials will be carried out where possible and where not, due care will be exercised in respect of waste disposal in accordance with current guidelines and legislation. We will only use licensed and appropriate organisation to dispose of waste.

We will reduce our water and energy consumption as much as possible by switching off equipment when not in use and using all equipment efficiently.

With purchasing new equipment, materials and products we will first consider if the need can be met in another way using existing resources before investigating low impact options such as renting or sharing. The initial and operational environmental impacts of products will be taken into account in purchasing decisions and we will use local labour and materials where available to reduce CO₂ and help the community.

We will seek to reduce the need to travel by promoting the use of email and video and phone conferencing. We will make additional efforts to accommodate the needs of those using public transport or bicycles and we will use 'green' vehicles and maintain them rigorously.

This policy is communicated and made available to all company personnel, supply chain, members of the public and other interested third parties. We will update this policy at least annually in consultation with staff and other stakeholders where necessary.
